Jeffersonville, IN 47130

Dear Ms. Harris:

My previous testimonial letter was written in 1998 and I am happy to provide this update regarding our experience with Water Energizers.

Initially, we were searching for different technologies to deal with very hard water when we discovered Water Energizers. For over a decade they have filled our need for treating our household water. Because of the positive results we experienced during this time, the Water Energizers were designed into the water system of my wife's retirement house, which was built three years ago.

We also use the Water Energizers in our swimming pool, where they serve a dual purpose: increased water clarity and absolute bacteria control with dramatically reduced chemical utilization. The Water Energizers were out of the pool for a couple days recently, and the pool water became mildly cloudy due to the extreme hardness. Within four hours of replacing the Water Energizers, the pool had returned to its normal clear state.

Due to concerns about bacteria in the standing water of our cistern, which collects some organic matter, adding Water Energizers to this system provides rain water without contaminants.

We are pleased with the results of this most unique product and continue to recommend their use.

Sincerely,

Andy Rust
