Ms. Rhonda Harris – President

Water Energizers, Inc.

3008 Middle Road, Suite A

Jeffersonville, Indiana 47130

Hello Rhonda,

Thank you very much for all of your help over the years. Your attention to the important points of a successful business relationship has made using Water Energizers so easy for proper commercial / industrial water treatment.

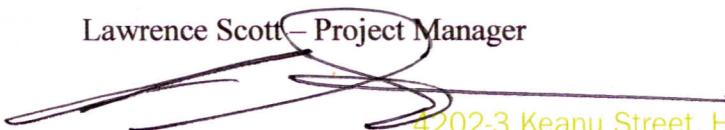

As you know, I have been involved with water treatment for over 25 years. My formal training is in Chemical Engineering from Michigan State University and I worked for Nalco Chemical Company and Trane Air Conditioning for many of those years. Although I received my early training in water treatment by using many different chemical products we always focused on the system results. Water Energizers for water treatment has certainly provided results. It has demonstrated results that matter such as corrosion control, scale inhibition, and microbiological control.

Water Energizers provide these three basic functions of water treatment in cooling water systems. These tasks are accomplished all without the hassle, mess, and safety concerns of using chemicals. The only requirements are to make sure that the Water Energizers are clean and the conductivity of the water is controlled. Concerning conductivity, we found that higher cycles of concentration can be run with Water Energizers than with traditional chemical water treatment.

We have used Water Energizers successfully in Hawaii for more than 15 years. I continue to support their use and would recommend them to anybody that wants to protect their systems against corrosion or scale.

Thanks again Rhonda for sharing your products and services with us here in Hawaii. Please feel free to forward my contact information to new prospective customers that have questions about the performance of your company and your product. Mahalo!

Lawrence Scott – Project Manager
