Subject: Update on pool application of Water Energizers

Rhonda,

I'm always impressed when you call to follow up on your product.

As you will most certainly recall, the engineer in me forces me to keep records on everything. And chemical consumption on my 20,000 gallon pool is no exception.

After eight years I'm still baffled exactly how your product works but I can tell you its effect.

I use less than half the chlorine than I did before the Water Energizers. I use one fifth the algaecide which I may or may not need, I use a small maintenance dose. I backwash one third less. And my equipment is lasting longer.

All this and a pool that sparkles.

I've had a pool now for 28 years and do know their idiosyncrasies, my conclusions are not based on a lack of experience

Dave
